

PlantPIs **An Interactive Web Resource on Plant Protease Inhibitors**

PlantPIs is a web querying system for a database collecting plant protease inhibitors data

Protease inhibitors in plants are naturally occurring proteins that inhibit the function of endogenous and exogenous proteases

The web resource is based on a relational database, containing data of plants protease inhibitors published in the literature

PlantPIs contains information extracted principally from MEROPS database, filtered, annotated and compared with other databases

The data have been re-organized in order to allow a flexible and easy way to access stored data
